

FasTrak SoftWorks, Inc. is a leading provider of software for maintenance management, file change management, and PLC programming. Focused on solving the issues that are unique to manufacturers, we have been helping to automate industrial companies for over 30 years. Our software products are used by manufacturers and industrial plants around the globe to make any type of production process run smoothly. Regardless of industry—water and wastewater, power and energy, automotive manufacturing, food processing, medical and pharmaceutical, or oil and gas—we provide solutions to help industrial companies meet unique and specific challenges.

AUTOMATION SOFTWARE

PLC WorkShop Suites

With editions for CTI 2500 Series, Siemens/TI, and Modicon PLCs, PLC WorkShop Suite provides all the tools necessary for a robust programming environment. Including capabilities for programming, testing, troubleshooting, and program management, PLC WorkShop Suite may be used to:

- Write, edit, and monitor PLC programs
- Test and debug programs before going live
- Secure and safeguard WorkShop files
- Compare differences between programs

We are committed to continued development and support for PLC WorkShop Suite. In partnership with Control Technology, Inc., we offer hardware availability and continued improvement of the CTI 2500 Series PLC line beyond the capability of the original Siemens/TI PLCs. Protecting our customers' PLC platform investments, we ensure companies are not forced to purchase new hardware and software, learn a new PLC language, rewrite, retest, and revalidate PLC programs, retrain staff, or risk costly downtime. We also offer PLC programming software for Siemens S5 and SY/MAX Square D PLCs.

FTVersionTrak

Designed with the industrial user in mind, FTVersionTrak secures the files essential to a company's manufacturing or business process, safeguarding them from unauthorized access, accidental deletion, or loss. Eliminating the unnecessary rework and frustration that results when changes across multiple team members are not controlled, FTVersionTrak tracks who accesses files, what changes were made, who made the changes, when they were made, and provides the ability to easily roll back the changes.

FTSolution for APT

FTSolution for APT is a direct replacement for Siemens APT. FTSolution for APT—together with the CTI 2500 Series PLCs—extends the APT programming languages for years to come and eliminates the need to migrate to another hardware or software platform. The FTSolution for APT ecosystem of products also includes:

- FTSolution for APT Hardware Debugger
- FTSolution for APT Simulator
- FTVersionTrak for APT

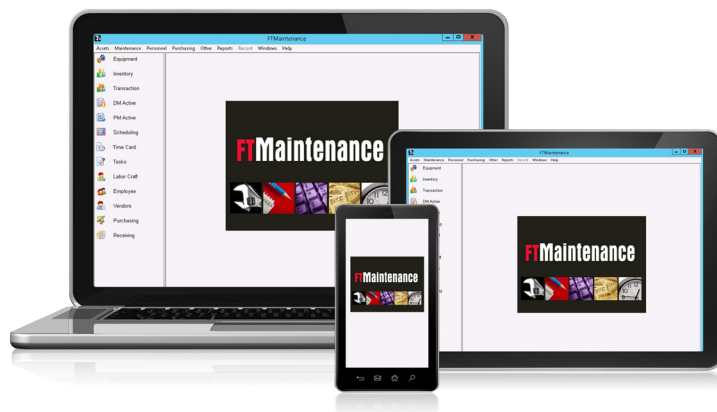

MAINTENANCE MANAGEMENT SOFTWARE

FTMaintenance

FTMaintenance provides a complete set of maintenance and asset management software tools to help industrial companies optimize their maintenance management practices and reduce the costs associated with maintaining their plants and equipment. Specifically designed for industrial environments, FTMaintenance automates everyday maintenance tasks and monitors real-time production data to save companies time and help them avoid costly breakdowns. Companies who use FTMaintenance are better able to:

- Reduce unplanned downtime
- Anticipate and prevent equipment failures
- Improve maintenance productivity
- Increase equipment life cycles
- Automate manual tasks

FTMaintenance Cloud is a hosted solution that provides anytime, anywhere access from any internet-enabled computer, laptop, tablet, or smart phone. With no hardware or software to purchase, install, or maintain, FTMaintenance Cloud does not burden IT departments. FTMaintenance is also available as an on-premise maintenance management solution that can be installed on your in-house computers and servers.

SUPPORT SERVICES

Technical Support

We pride ourselves on the superior level of service we provide to our customers. Our knowledgeable support representatives provide immediate and accurate solutions to user issues. Unlimited technical support is included at no charge for 12 months following purchase and through affordable maintenance contracts after the first year.

Training

Our training classes accelerate productivity and return on investment. Our customers attend classes at FasTrak to learn from other users or choose onsite training customized to their needs.

Custom Services

We offer uniquely valuable custom solutions to users of our software including consulting, implementation support, data importation, and software system integration.
